Vitamin D	32 ng/mL	30 to 100	Normal
CBC (complete blood count)	Within normal limits		Normal

ASSESSMENT AND PLAN

- Hypertension, Stage 1: Well controlled on Lisinopril 10 mg daily. Blood pressure at 128/78, stable and within target. Continue current medication and home monitoring. Follow-up labs in 12 months.

- Cardiovascular risk: Lipid panel is favorable. Family history of stroke (father, age 72) remains a risk factor. Continue heart-healthy diet, regular aerobic exercise, and low-dose aspirin 81 mg daily.
- Weight management: BMI 27.1, mildly above ideal range. Goal is to lose 10 to 12 lbs over the next 12 months. Current walking routine and new yoga practice are positive. Reviewed dietary modifications: more fish and vegetables, less red meat, reduced sodium.
- Mental health: Patient reports moderate stress related to caregiving responsibilities and work demands. No signs of clinical depression or anxiety. Encouraged continued physical activity and discussion with Tanya Mitchell, noted as a supportive relationship. Referred to community mental health resources, patient will consider.
- Dental and vision: Patient confirmed dental visit February 2026 at Magnolia Dental Group and updated eyeglass prescription January 2026 at Belle Meade Vision. No concerns.

MEDICATIONS REVIEWED

Medication	Dose	Frequency	Refills
Lisinopril	10 mg	Once daily, morning with food	Refill authorized, Walgreens on file
Aspirin	81 mg	Once daily	OTC, patient manages
